

Expanded CAD product drawings now online

Instant access to construction drawings

Finding the right construction drawings for a particular application is now faster and easier, thanks to MechoShade Systems' greatly expanded online Standard Details Library. The CAD library has now been enlarged to more than 550 drawings representing nearly all of the most commonly occurring installation scenarios.

The result?

The site provides instant access to the CAD files needed to see how a product can be incorporated into a particular installation, without having to make phone calls or send e-mails. And with the quick preview function on the site, dealers can see at a glance whether the files are appropriate without having to download them first.

The site isn't just for dealers. Architects and designers can browse the site and download the files as well, since no login is required.

To view and download the files, visit MechoShadeSystems.com and click on "construction drawings" in the top right corner. The CAD files are available in both .dwg and .pdf formats.

The future

MechoShade Systems also plans to expand the online availability of CAD files by adding a library of corner conditions to the site, enabling dealers, architects, and designers to have instant access to an even broader range of shade-system solutions.
